

# Contents

## Preface

## Programme

## Sessions

### Session 1 Balance between Semi- and Fully Automated Scene Analysis Systems

Jamet, O., Airault S., Guiavarch, P. Two Examples of Semi-Automatic Capture Processes in a National Mapping Agency

Thorpe, J. Balance between Semi- and Fully Automated Scene Analysis Systems

### Session 2 Pro's and Con's of Parametric Models

McGlone, C. Some Considerations in 3D Object Modeling

Fua, P. Parametric Models are Versatile: The Case of Model Based Optimization

### Session 3 Interpretation Models and Reasoning Strategies in Scene Analysis

Neumann, B., Schröder, C. How Useful is Formal Knowledge Representation for Image Interpretation?

Schenk, T. Interpretation Models and Reasoning Strategies in Scene Analysis

### Session 4 Implementation Issues for Orientation Algorithms

Haggrén, H. Implementation Issues for Orientation Algorithms

Mayr, W. *No manuscript available at time of printing*

### Session 5 Matching, Grouping

Nevatia, R. Role of Matching and Grouping Operations in Automated Scene Analysis

Boyer, K. The Role of Perceptual Organization in Automated Scene Analysis

### Session 6 Visualization and Simulation

Gross, M. 3D Modeling and Approximation for Visualization and Simulation

Lukes, G. Cartographic Support for Advanced Distributed Simulation

### Session 7: Geometry in Scene Analysis

Mulawa, D. Several Aspects of Modeling and Stochastic Analysis of a Photogrammetric Estimation of a 3D Straight Line

Zisserman, A. Uncalibrated Vision
