Table of Contents

FOREWORD 1

ISPRS WORKSHOP on "Resource Mapping from Space"

Workshop Summary Sheet 2

United Nations Conclusions and Recommendations 3-4

The Role of Remote Sensing in Natural Resource Management 5-11

Future Prospects for Mapping from Space 12-26

Data Fusion for a Better Exploitation of Data in Environment and Earth Observation Sciences 27

Sustainable Development and Remote Sensing 28-37

Monitoring Water Resources and Agro-Ecosystem Productivity from Space 38-43

Monitoring from Space of Global Vegetation and Land Use Change – Recent Advances and Imminent Possibilities 44

Operational Crop Monitoring and Production Forecast by Remote Sensing in Hungary 45-51

Satellite Remote Sensing Application in Agriculture-Crop Monitoring, Yield Forecasting, and Estimation 52-63

Landscape Changes in Slovak Republic 1970's – 1990's 64-70

Personal Ground Station (PGS) Scanner – Network for "RESURS-O" Satellite Data Acquisition and Processing. New Image Neuronet Processing Technology for Environment Monitoring and Resource Mapping 71-76

ISPRS/EARSeL WORKSHOP on "Remote Sensing for the Detection, Monitoring, and Mitigation of Natural Disasters"

Workshop Summary Sheet 77

United Nations Conclusions and Recommendations 78-79

Report by Dowman and Wald 80-84

Natural Disasters: Remote Sensing Capabilities and Applications in a Wide Context 85-92

Space Technology and Earthquake Hazard Management 93-97

Monitoring Oil Spills from Space: State of the Art and Perspectives 98

Natural Hazards of Geologic Origin – Erosion, Land Degradation/Desertification, Volcanoes and Active Faults – The UNESCO/IUGS Geological Application of Remote Sensing (GARS)- Programme 99-103

Remote Sensing Systems for Drought and Desertification Monitoring the Case of Morocco 104-109

Photogrammetry and Remote Sensing in Monitoring, Prediction and Prevention of Environmental Disasters 110-113

Remote Sensing Techniques for Monitoring Hazardous Waste Sites and Sensitive Aquifers 114-120

Operational Use of Environmental Satellite Data for Hazardous Applications 121

Progress of the CEOS Disaster Management Support Project 122-125

Application of <<4D>> Techniques in Flood Monitoring in China 1998 126-127

ISPRS/NASA SEMINAR on "Environment and Remote Sensing for Sustainable Development"

Workshop Summary Sheet	128
United Nations Conclusions and Recommendations	129-131
High Resolution Earth Imaging From Space – A Commercial Perspective on a Changing Landscape	132-143
Perspectives of Indian Remote Sensing Programme Towards Sustainable Development	144
Prevention of Wildfires by Satellite	145-150
NASDA's Strategy for Earth Observation Data Use Promotion in Developing Countries	151-155
New Russian Atlas 'Space Methods for Geoecology"	156-157
Multifunctional Optoelectronic System for Aero-space Monitoring (MOSAM)	158-168
APPENDIX	168-169
