

Working Group 8: Geo-information systems

J.J. Nossin

Chairman of the Netherlands' Society for Photogrammetry

The participants in the special Working Group sessions on Geo-Information Systems (GIS) of the Commission VII symposium,

taking note of the rapid advancement in the development and applications of Geo-Information Systems, express their opinion that major attention should be focussed on GIS at the next ISPRS Congress, Kyoto, 1988,

and that the formation of a Working Group on GIS under the mandate of Commission VII should be given serious consideration.

This working group should have included in its task description not only to monitor and contribute to technical progress and applications of GIS, but also to analyze and identify the users and their requirements.

The proper forwarding of this expression of opinion is left in the hands of the Committee of Commission VII of the ISPRS.

Mr J.P.G.K. Clevers

Mr Clevers my congratulations with the Symposium Prize of Commission VII 1986.

You are the author of three papers in the proceedings. The attention of the jury was in particular drawn by your paper: "The derivation of a simplified reflectance model for the estimation of LAI".

Mr Clevers, we wish you a good and successful trip to Kyoto in 1988.
